Unlined, elastic wrist, bounded cuff.

SIZES: 10-11 **TR40A1** SKU: 1125.001

LEATHER CUTS & CUFF STYLES

LEATHER CUTS

Grain
Grain leather is the smooth outside of the hide. This type of leather provides durability, dexterity, and is the most luxurious.

Split
Split leather is the rougher inside of the hide. The different types are Side, Shoulder, or Belly split.

SIDE SPLIT
Comes from the rib area of the animal. It is the most uniform leather with less imperfection and the best for consumer appeal.

SHOULDER SPLIT
Is more economical than side, but less durable. The additional movement of the animal in this shoulder area creates less fibers and a more visible texture difference.

BELLY SPLIT
Is the most economical, however, it has the least consistency of texture and appearance.

FIT GUIDE

Place your right palm on the size guide below with your fingers closely together. To work out your glove size align the knuckle of your index finger on the left side of the line. Please note, this is an approximate measurement; glove sizing can vary between styles.

SMALL 7	EXTRA EXTRA LARGE 11
MEDIUM 8	ONE SIZE OS

TYPES OF LEATHER

Cowhide
Cow leather is the most commonly used leather within the glove industry due to its availability. It is warmer than pigskin and goatskin and the most heat resistant.

Goatskin
The natural lanolin found in goatskin makes it one of the softest leathers. It is the most penetration proof of all leathers and very waterproof. This leather is highly recommended for applications requiring tactile sensitivity.

Pigskin
Pigskin has the greatest breathability due to its porous texture. Also, pigskin tends to become softer with use and is the most waterproof. When laundered, this leather will return to its natural soft texture quicker than other leathers. It is also the most economical.

Deerskin
Known to be one of nature's most luxurious, softest leathers, providing all day comfort and sensitivity. It is the warmest of all leathers and is also long wearing.

CUFF STYLES

Cuff styles vary depending on the needs of the applications. The most common styles are: safety cuff, gauntlet cuff, band top, knit-wrist and slip-on.

SAFETY CUFF

GAUNTLET CUFF
