FIT TESTING

Worksafe BC and CSA require fit tests to be performed annually for respiratory equipment. Our Treen Health and Safety consultants are certified to perform comprehensive fit testing and can also help you to develop an effective respiratory protection program. We provide convenient onsite testing in compliance with occupational health and safety codes and CSA. Contact us today to schedule your routine fit test.

There are two fit testing methods, these are known as:

Quantitative and Qualitative tests

QUANTITATIVE TESTS

Can be used to fit test all types of tight-fitting masks including disposable, half and full face masks. Quantitative tests give an objective assessment of facial fit and provide a direct numerical result called a Fit Factor.

QUALITATIVE TESTS

Rely on the wearer's subjective assessment of face seal leakage. These methods, during a set of test exercises, use the wearer's sense of smell or taste to detect face seal leakage of a test agent.
